4 Bank loans generally pay interest at rates which are periodically determined by reference to a base lending rate plus a premium. These base lending rates are generally (i) the Prime Rate offered by one or more major United States banks, (ii) the lending rate offered by one or more European banks such as the London Interbank Offered Rate ("LIBOR"), (iii) the certificate of deposit rate, or (iv) Secured Overnight Financing Rate ("SOFR"). Bank Loans, while exempt from registration, usually have certain restrictions on resale and cannot be sold publicly. Floating rate bank loans often require prepayments from excess cash flow, or permit the borrower to repay at its election. The degree to which borrowers repay, whether as a contractual requirement or at their election, cannot be predicted with accuracy.
